

Potatoes

Fresh thinking in crop storage

Experience: Biofresh have supplied ethylene systems to the potato industry since 2003, for application in ware and seed stores.

With systems in place throughout Europe, the United States, and Asia, Biofresh supply units to be either rented or bought outright.

Reduced Spoilage: Biofresh Ethylene Management Systems use natural ethylene gas to suppress the sprouting process, the main cause of potato spoilage.

Even better, they increase consumer confidence by leaving none of the harmful residues of chemical treatments such as CIPC.

Our systems provide you with a reliable, easy to use and cost effective way to extend the life of fresh produce throughout the supply chain.

Many growers, wholesalers, distributors and retailers are now reducing wastage, increasing their profits and improving their ethical credentials thanks to biofresh.

Please contact Biofresh for further technical information.

No Chemical
Residues

Under Biocidal Products Regulations (EU) 528/1012 anyone who wishes to market an ozone generator for a biocidal application within the EU must have their product authorised in accordance with the BPR. Biofresh are a member of the EUOTA Ozone Task Force which has submitted an ozone dossier to meet the requirements of these regulations.
